

DECO Sigma 8: All the key benefits summed up in 4 "Ps" ...

Moutier, 14th November 2006.

Flagship of the Sigma range, this machine may be small but it has all the qualities of a bigger machine! Small in size and big in terms of productivity, the DECO Sigma 8 provides its customers with all the benefits of an automatic cam-type turning machine.

In addition to these two key benefits, the Swiss manufacturer has developed a machine concept which harnesses new technologies and which enables users to enjoy diameters accurate to +/- 1 μ (0.001 mm) ! Even if such precision is not always required, it does provide the security and peace of mind of not having to carry out 100% inspection of all finished workpieces.

Another feature that Tornos wanted to offer its customers was affordability. This machine is available at a price which competitors will find hard to match!

To recap, the key features of this turning machine can be summed up in 4 "Ps", exceptional **P**recision, high **P**roductivity, reduced foot **P**rint and competitive **P**rice!

Don't miss the opportunity to discover it for yourselves at Prodex, 14-18 November 2006 in Basle. The Tornos specialists look forward to seeing you there!

Principal benefits:

- High precision ± 0.001 mm.
- Simplicity and power of the new integrated powered spindle
- Very compact machine design
