## **New products at one and the same time !**

Moutier, 20 May 2008

Tornos is unveiling the world premiere of the Delta 20/5 machine at Siams 2008. This machine is the first of the new Delta range designed for the production of straightforward parts of medium complexity.

The Tornos group announced that it had agreed a partnership with Tsugami only a few months ago and already the first machines are being presented. This new range of 100% Tornos products made by Tsugami are distinguishable by the number of axes they are equipped with: lower than the other products in the Swiss manufacturer's catalogue. Featuring 3, 4 or 5 axes in capacities of 12 mm and 20 mm, the manufacturer is launching no fewer than 9 new products. Siams represents the first stage on an itinerary which will see these machines presented in Germany, Italy, Spain, France, the USA and Asia.

The first machines will be delivered to the customer from September 2008 and the lead time during this period is planned at less than a month!

The highlights of this new range are without doubt being equipped with straightforward Tornos products (quality, precision, ergonomics) and therefore being in a different price range to much more elaborate machines.

### **Different needs, different solutions**

This new range of straightforward machines are sold with a minimum of options. This is a significant difference with regards to other Tornos products where it is very often possible to 'build' one's own customized machine. The Delta range is a very tailored response to very specific market requirements. Customers enjoy all the benefits of a straightforward and reliable machine for trouble-free production of parts requiring highly complex operations.

For further details on this new range, please contact Mr Alain Augsburger [augsburger.a@tornos.com](mailto:augsburger.a@tornos.com)
